GNU GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright (C) 2007 Free Software Foundation, Inc. <http://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it :
Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are

To protect your rights, we need to prevent others from denying you these rights or asking you to surren

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the softwar

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this

Some devices are designed to deny users access to install or run modified versions of the software insi

Finally, every program is threatened constantly by software patents. States should not allow patents to

The precise terms and conditions for copying, distribution and modification follow.
TERMS AND CONDITIONS
0. Definitions.

\This License" refers to version 3 of the GNU General Public License.

\Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor mas

\The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed

To \modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright

A \covered work" means either the unmodified Program or a work based on the Program.

To \propagate" a work means to do anything with it that, without permission, would make you directly or

To \convey" a work means any kind of propagation that enables other parties to make or receive copies. 1

An interactive user interface displays \Appropriate Legal Notices" to the extent that it includes a con
1. Source Code.

The \source code" for a work means the preferred form of the work for making modifications to it. \Obje

A \Standard Interface" means an interface that either is an official standard defined by a recognized s

The \System Libraries" of an executable work include anything, other than the work as a whole, that (a)

The \Corresponding Source" for a work in object code form means all the source code needed to generate,

The Corresponding Source need not include anything that users can regenerate automatically from other pa

The Corresponding Source for a work in source code form is that same work.
2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irr

You may make, run and propagate covered works that you do not convey, without conditions so long as you

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicen
3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law ful

When you convey a covered work, you waive any legal power to forbid circumvention of technological measu
4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided

You may charge any price or no price for each copy that you convey, and you may offer support or warran
5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the

  * a) The work must carry prominent notices stating that you modified it, and giving a relevant date
  * b) The work must carry prominent notices stating that it is released under this License and any c
  * c) You must license the entire work, as a whole, under this License to anyone who comes into poss
  * d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; howe

A compilation of a covered work with other separate and independent works, which are not by their natur
6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that yo

  * a) Convey the object code in, or embodied in, a physical product (including a physical distributi
  * b) Convey the object code in, or embodied in, a physical product (including a physical distributi
  * c) Convey individual copies of the object code with a copy of the written offer to provide the Co
  * d) Convey the object code by offering access from a designated place (gratis or for a charge), an
  * e) Convey the object code using peer-to-peer transmission, provided you inform other peers where

A separable portion of the object code, whose source code is excluded from the Corresponding Source as

A \User Product" is either (1) a \consumer product", which means any tangible personal property which i

\Installation Information" for a User Product means any methods, procedures, authorization keys, or oth

If you convey an object code work under this section in, or with, or specifically for use in, a User Pro

The requirement to provide Installation Information does not include a requirement to continue to provi

Corresponding Source conveyed, and Installation Information provided, in accord with this section must
7. Additional Terms.

\Additional permissions" are terms that supplement the terms of this License by making exceptions from

When you convey a copy of a covered work, you may at your option remove any additional permissions from

Notwithstanding any other provision of this License, for material you add to a covered work, you may (i

    * a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of
    * b) Requiring preservation of specified reasonable legal notices or author attributions in that ma
    * c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versi
    * d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
    * e) Declining to grant rights under trademark law for use of some trade names, trademarks, or serv
    * f) Requiring indemnification of licensors and authors of that material by anyone who conveys the

All other non-permissive additional terms are considered \further restrictions" within the meaning of s

If you add terms to a covered work in accord with this section, you must place, in the relevant source

Additional terms, permissive or non-permissive, may be stated in the form of a separately written licen
8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any att

However, if you cease all violation of this License, then your license from a particular copyright hold

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright ho

Termination of your rights under this section does not terminate the licenses of parties who have recei
9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary
10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original l

An \entity transaction" is a transaction transferring control of an organization, or substantially all

You may not impose any further restrictions on the exercise of the rights granted or affirmed under thi
11. Patents.

A \contributor" is a copyright holder who authorizes use under this License of the Program or a work on

75 Module cuon.Databases.xbase

75.1 Functions

---

dbfreader(*f*)

Returns an iterator over records in a Xbase DBF file.

The first row returned contains the field names. The second row contains field specs: (type, size, decimal places). Subsequent rows contain the data records. If a record is marked as deleted, it is skipped.

File should be opened for binary reads.

---

dbfwriter(*f*, *fieldnames*, *fieldspecs*, *records*)

```
Return a string suitable for writing directly to a binary dbf file.

File f should be open for writing in a binary mode.

Fieldnames should be no longer than ten characters and not include \.
Fieldspecs are in the form (type, size, deci) where
    type is one of:
        C for ascii character data
        M for ascii character memo data (real memo fields not supported)
        D for datetime objects
        N for ints or decimal objects
        L for logical values 'T', 'F', or '?'
    size is the field width
    deci is the number of decimal places in the provided decimal object
Records can be an iterable over the records (sequences of field values).
```

220.2.1 Methods

NotTextNodeError(*self*)

__init__(*self*)
Overrides: cuon.Logging.logs.logs.__init__

getAttributValue(*self*, *node*, *sName*)

getColumnAt(*self*, *cyTable*, *iIndex*)

getColumnSpecification(*self*, *cyColumn*, *sValue*)

getData(*self*, *cyNode*)

getEntries(*self, sFileName*)

getEntry(*self, cyNode, cyName, cyValue*)

getEntryAt(*self, cyEntries, iIndex*)

getEntrySpecification(*self, cyEntry, sValue*)

getForeignKey(*self, cyNode, cyName, cyValue*)

getListOfEntries(*self, cyNode*)

getListOfForeignKeys(*self, cyNode*)

getListOfSequences(*self, cyNode*)

getListOfTables(*self, cyNode*)

getNode(*self, cyNode, cyValue*)

getNodeData(*self, cyNode, sValue*)

getNodes(*self, cyNode, cyValue*)

getNumberOfEntries(*self, cyEntries*)

getNumberOfFields(*self, cyTable*)

getRootNode(*self, doc*)

getSequence(*self, cyNode, cyName, cyValue*)

getTable(*self, cyNode, cyName, cyValue*)

getTableSpecification(*self, cyTable, sValue*)

---

getTextFromNode(*self*, *node*)

---

scans through all children of node and gathers the text. if node has non-text child-nodes, then NotTextNodeError is raised.

---

nodeToDic(*self*, *node*)

---

nodeToDic() scans through the children of node and makes a dictionary from the content.

1. three cases are differentiated.
    - if the node contains no other nodes, it is a text-node and {nodeName:text} is merged into the dictionary.
    - if the node has the attribute "method" set to "true", then it's children will be appended to a list and this list is merged to the dictionary in the form: {nodeName:list}.
    - else, nodeToDic() will call itself recursively on the nodes children (merging {nodeName:nodeToDic()} to the dictionary).

---

readDocument(*self*, *filename*)

---

test(*self*)

Inherited from cuon.Logging.logs.logs(Section 131.2)

out(), printOut(), setLogLevel()

221 Package cuon.XMLRPC

221.1 Modules

- **xmlrpc** *(Section 222, p. 506)*

222 Module cuon.XMLRPC.xmlrpc

222.1 Variables

Name	Description
__package__	**Value:** `'cuon.XMLRPC'`

222.2 Class myXmlRpc
cuon.Databases.dumps.dumps ⎤

cuon.Logging.logs.logs ⎦

cuon.XMLRPC.xmlrpc.myXmlRpc

222.2.1 Methods

__init__(*self*)

Overrides: cuon.Logging.logs.logs.__init__

---

getMyServer(*self*)

if the CUON_SERVER environment-variable begins with https, then the server use SSL for security.

Return Value
    Server-Object for xmlrpc

getZopeServer(*self*)

if the CUON_SERVER environment-variable begins with https, then the server use SSL for security.

Return Value
    Server-Object for xmlrpc

---

getServer(*self*)

---

getServer2(*self*)

---

getHelpServer(*self*)

---

test(*self*)

---

getInfoOfTable(*self*, *sNameOfTable*)

---

callRP(*self*, *rp*, **c*)

Inherited from cuon.Databases.dumps.dumps(Section 71.2)

checkType(), closeDB(), doCompress(), doDecode(), doEncode(), doUncompress(), formatDate(), getActualDateTime(), getCheckedValue(), getDateTime(), getFirst-DayOfMonth(), getFirstDayOfMonthAsSeconds(), getFirstLastDayOfLastMonthAs-Seconds(), getFirstOfMonth(), getFirstOfMonth2(), getFirstOfYear(), getLastDay-OfMonth(), getLastDayOfMonthAsSeconds(), getLastOfMonth(), getLastOfYear(), getNewUUID(), getSeconds(), getTime(), getTimeString(), loadObject(), openDB(), pickleObject(), saveObject(), saveTmpData(), showPdf(), startExternalPrg(), un-pickleObject(), writeEmailLog()
